4.1 Retrieving data from CBO	7
4.2 Adding or Updating Data in the CBO	8
4.3 Deleting Data from a CBO	8

1 Prerequisites

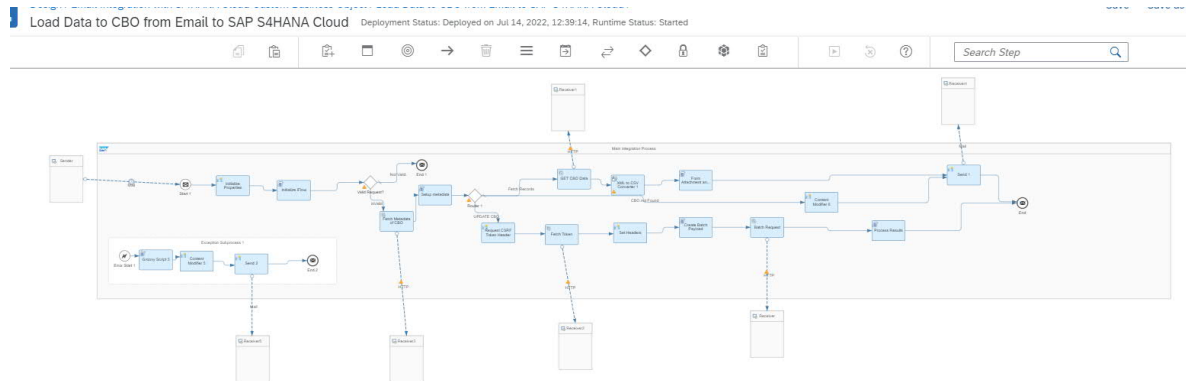

- An SMTP server to support Email integration with SAP Cloud Integration needs to be available. This can be a customer SMTP server, or a new account set up with an internet provider, such as Gmail.
- SAP S/4HANA Cloud Custom Business Objects are exposed as APIs via Communication Scenario / Communication Arrangement
- Credentials created in SAP Cloud Integration has access to any CBO that is in scope for data interaction via email.

2 Documentation

This iFlow allows an end user to retrieve, update and delete data from a SAP S/4HANA Custom Business Object (CBO). The first step would be for the user to retrieve the data to retrieve the correct CSV format (even if the CBO is empty) and then the user can then add, modify or delete the data in the CBO by modifying the CSV file and sending an email back to the inbox monitored by the SAP Cloud Integration iFlow.

For reference, you can refer to this blog for information on email integration with SAP Cloud Integration:

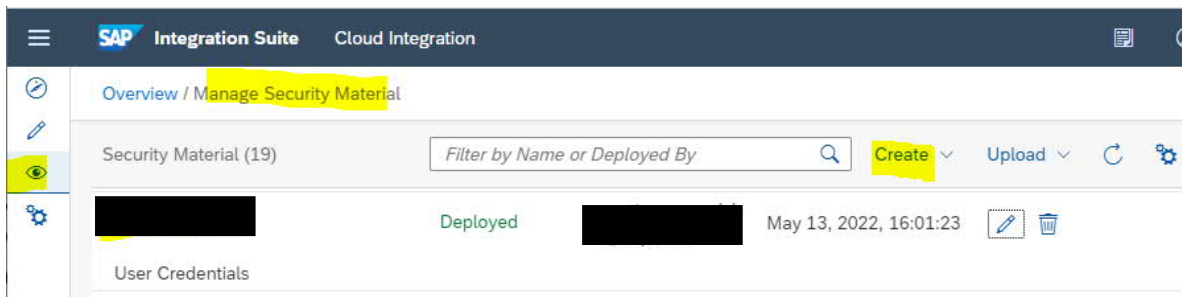

<https://blogs.sap.com/2022/05/17/reprocessing-messages-using-email-for-sap-cloud-integration/> The blog also contains links on working with the mail adapter in SAP Cloud Integration and how to configure a Gmail account if a corporate SMTP server is not available.

3 Configuration steps on SAP Cloud Integration

3.1 Configure Mail Sender Adapter

Depending on your mail server requirements, this section will vary but the iFlow should be configured with the username and password to monitor the email address that the payloads will be sent to and from. In this example, we are using GMAIL so a new "User Credentials" artifact was created under "Manage Security Material" application.

This credential name is used in both the sender and receiver channels.

The address is also required in the Sender channel in addition to the Credential Name.

Configure "Load Data to CBO from Email to SAP S4HANA Cloud"

The screenshot shows the configuration page for the 'Load Data to CBO from Email to SAP S4HANA Cloud' iFlow. The 'Sender' tab is selected. Under the 'Connection' section, the following fields are visible: 'Sender' (set to 'Sender'), 'Adapter Type' (set to 'Mail'), 'Address' (redacted), and 'Credential Name' (redacted).

3.2 Configure S4HANA Cloud Receiver Adapter

On the receiver tab, enter the S/4HANA Cloud Hostname and the credentials for the communication arrangement that contains the CBOs.

Configure "Load Data to CBO from Email to SAP S4HANA Cloud"

Sender	Receiver	More
<div>Connection</div> <div> <div>Receiver:</div> <div>S4HANA2</div> </div> <div> <div>Adapter Type:</div> <div>HTTP</div> </div> <div> <div>Address:</div> <div>https://[S4HostbName]]/sap/opu/odata/sap/\$([property.p_cboName])\$([property.p_cboEntit</div> </div> <div> <div>S4HostName:</div> <div></div> </div> <div> <div>Credential Name:</div> <div></div> </div>		

3.3 Configure Email Receiver

Configure the email receiver channel according to your Email SMTP requirements. For example, here is a Gmail configuration.

Configure "Load Data to CBO from Email to SAP S4HANA Cloud"

Sender	Receiver	More
<div>Connection</div> <div> <div>Receiver:</div> <div>EmailReceiver</div> </div> <div> <div>Adapter Type:</div> <div>Mail</div> </div> <div> <div>Address:</div> <div></div> </div> <div> <div>Protection:</div> <div>SMTPS</div> </div> <div> <div>Authentication:</div> <div>Plain User/Password</div> </div> <div> <div>Credential Name:</div> <div></div> </div>		

4 Executing the Integration Flow

Once the iFlow is deployed, all interactions with it can be done via email from an approved sender.

4.1 Retrieving data from CBO

Typically the first step will be to retrieve the fields and/or any existing data from a CBO. In order to receive an extract of the CBO in csv format, send an email to the inbox configured with the integration with the following subject format:

CBO|GET|<CBONAME>

Clipboard Basic text Sensitivity voice

Not set Non-Business Public Internal Confidential

The following recipient is outside your organization: [Redacted]

To [Redacted]

Cc [Redacted]

Send

Subject CBO|GET|YY1_ORDERINFO

You will get a CSV file back to your email with the CBO data (or just the headers if the CBO is empty).

CBO|GET|YY1_ORDERINFO - RESULTS

To [Redacted]

YY1_ORDERINFO.csv
2 KB

Attached is the extract for CBO YY1_ORDERINFO.

	A	B	C	D	E	F	G	H
1	SAP_UUID	OrderNum	Product	Quantity	OrderDate	OrderShip	OrderTimeStamp	
2	fa163ede-	12345678	DemoProc	10		FALSE		
3	fa163ede-	TMM0012	Product8	11	2021-08-1	TRUE	2021-08-12T12:01:55

Subject

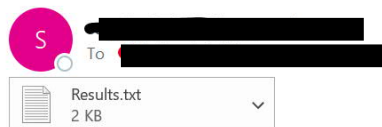

CBO|UPDATE|YY1_ORDERINFO

YY1_ORDERINFO.csv

111 bytes

The sender will get an email back from BTP Cloud Integration with status lines and the entire response payload from S/4HC in case of any errors.

CBO|UPDATE|YY1_ORDERINFO - RESULTS

Here are the results of the CBO operation. ContainsError: FALSE

SUCCESS: HTTP/1.1 204 No Content

SUCCESS: HTTP/1.1 201 Created

4.3 Deleting Data from a CBO

To delete data from a CBO, pass in a list of SAP_UUIDs with the email subject "CBO|DELETE|<CBO_NAME>"

The following recipient is outside your organization [REDACTED]

Send

To

Cc

Subject

[REDACTED]

[REDACTED]

CBO|DELETE|YY1_ORDERINFO

YY1_ORDERINFO.csv
253 bytes

▼

And the return email will contain the results. Result code 204 is a successfully DELETE operation and removed the record from the CBO.

CBO|DELETE|YY1_ORDERINFO - RESULTS

Here are the results of the CBO operation. ContainsError: FALSE
