## Refresh Active Key for Stored Value Solutions

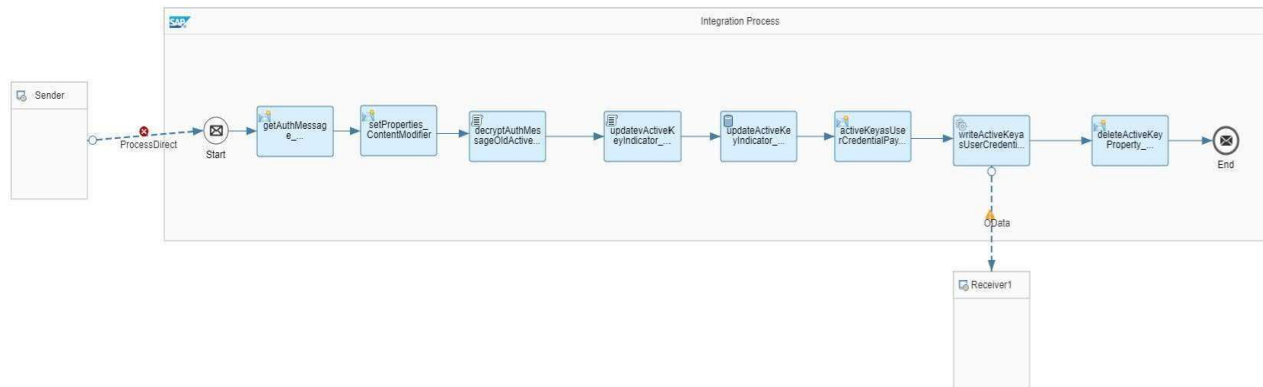

## Contents

Prerequisites .....	3
Documentation .....	4
Configuration steps on SAP Cloud Integration.....	5
3.1 Configure Sender Adapter.....	5
3.2 Configure Receiver Adapter.....	5
3.3 Configure Parameter.....	5

# 1. Prerequisites

- You should have access to SAP Cloud Integration tenant.
- You should contact Stored Value Solutions (SVS) to buy liscence for accessing SVS system: <https://www.storedvalue.com/> and get the following information o Application User o Root Key o Auth-ID o Endpoint for Authentication and Service call

## 2. Documentation

This Iflow will be triggered by the Iflow - Request eGiftCard from Stored Value Solutions once the active key should be refreshed.

- The new active key is accessed by decrypting AuthMessage received from SVS with the old active key  
The active key indicator is updated and then the active key with its alias name is written into security material by calling OData API with Operation Create(POST)  
The decrypted active key name and active key are deleted from the exchange property.
