CUSTOMER

Create or Update Customer Master Data from SAP ERP to SAP S4HANA Cloud

Content

1 Prerequisites	3
2 Documentation	4
3 Configuration steps on SAP Cloud Integration	5
3.1 Configure Sender IDOC Adapter	5
3.2 Configure Receiver ODATA Adapter (GET Customer)	7
3.3 Configure Receiver SOAP Adapter (CREATE Customer)	9
3.4 Configure Receiver SOAP Adapter (UPDATE Customer)	11
3.5 Configure Receiver system (SAP S/4HANA Cloud)	13

1 Prerequisites

The Iflow consists in sending a Customer Master Data from SAP ERP (SAP ECC) to S/4HANA Cloud.

- Configuration steps in SAP ERP (SAP ECC):
 - o Setting up of IDoc Communication for create and update scenario which includes:
 - Define Logical Systems, Assign Logical Systems, Create the RFC Destination, Create Port for IDOC Processing, Maintain ALE Distribution Model, Manually Maintain Partner Profile.
- Configuration steps in SAP S/4HANA Cloud:
 - o Configuration of Communication Arrangement for Scenario ID SAP_COM_0008 Related OData connection details for create and update scenario which includes:
 - Address, Proxy Type and Authorization.

2 Documentation

Regardless of whether the Customer IDoc defined in SAP ERP is DEBMAS07 or ZZ_DEBMAS_360, the flow will filter by the main IDoc node to process all messages as if they were one.

What will define if the Customer is a creation or a change is a call to the API OData with the Customer number to check if the Customer exists in S/4HANA Cloud, if it exists, it follows the change route, if not the creation route.

Customer Creation or Change in S/4HANA Cloud is triggered by SOAP API call related to communication Scenario SAP_COM_0008 - Business Partner, Customer and Supplier Integration.

3 Configuration steps on SAP Cloud Integration

To set up the IDOC

Try to define specific section, such as:

- Receiver Configuration
- Sender Configuration
- Cloud Connector Configuration
- Sender System Configuration
- Receiver System Configuration

If there are any backend system configuration needed, please describe them here shortly.

The following subsections are only proposals and can be changed.>

3.1 Configure Sender IDOC Adapter

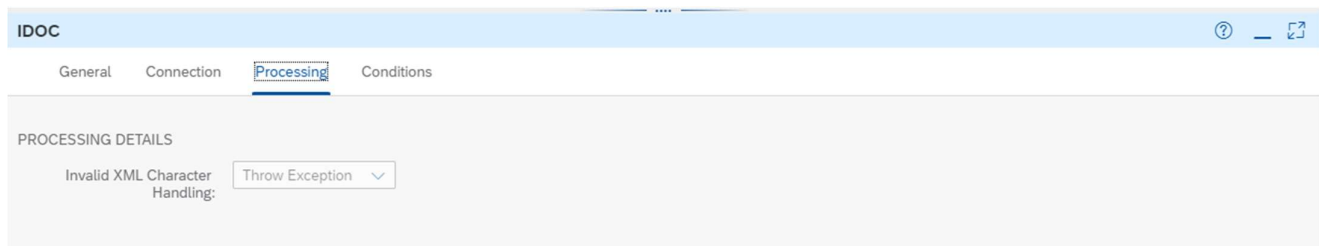

The screenshot shows the 'IDOC' configuration window with the 'General' tab selected. The 'Name' field is set to 'IDOC_SND_ERP'. Below this, there are two sections: 'CHANNEL DETAILS' and 'ADAPTER DETAILS'. In 'CHANNEL DETAILS', 'Direction' is 'Sender', 'System' is 'SAP ERP', and 'Description' is empty. In 'ADAPTER DETAILS', 'Adapter Type' is 'IDOC', 'Transport Protocol' is 'HTTPS', and 'Message Protocol' is 'IDoc SOAP'.

Figure 1 – Sender IDOC Adapter – General/Channel Details.

The screenshot shows the 'IDOC' configuration window with the 'Connection' tab selected. The 'CONNECTION DETAILS' section contains three fields: 'Address' is '/Customer/IDOC/DEBMAS07', 'Authorization' is 'User Role' (selected from a dropdown), and 'User Role' is 'ESBMessaging.send'.

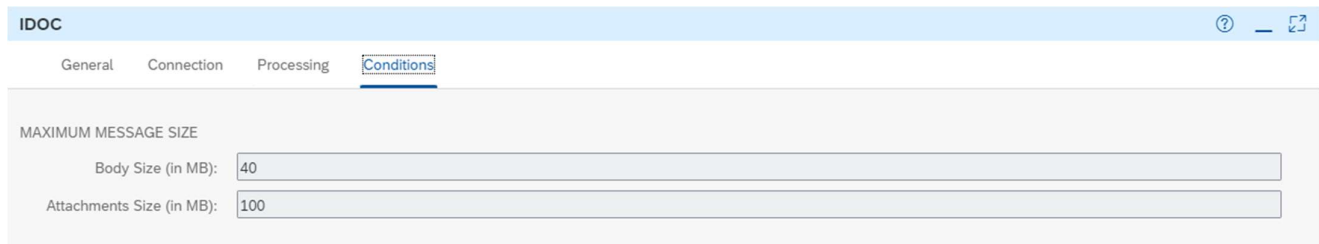

Figure 2 - Sender IDOC Adapter – Connection.

Address	Enter the URL of the SAP ERP system to connect to.
Authorization	Enter the authorization option. In this case, it was used "User Role" type, since this is based on roles defined on the tenant for the user associated with the inbound request.
User Role	Enter the User Role. It is a predefined role provided by SAP which authorizes a sender system to process messages on a tenant.

The screenshot shows the 'IDOC' configuration window with the 'Processing' tab selected. The 'PROCESSING DETAILS' section contains a label 'Invalid XML Character Handling:' followed by a dropdown menu currently set to 'Throw Exception'.

Figure 3 - Sender IDOC Adapter – Request Processing.

The screenshot shows the 'IDOC' configuration window with the 'Conditions' tab selected. The 'MAXIMUM MESSAGE SIZE' section contains two input fields: 'Body Size (in MB):' with the value '40' and 'Attachments Size (in MB):' with the value '100'.

Figure 4 - Sender IDOC Adapter – Conditions/Maximum Message Size.

3.2 Configure Receiver ODATA Adapter (GET Customer)

The receiver OData Adapter for Get Customer data is described below:

The screenshot shows the 'OData' configuration window with the 'General' tab selected. The 'Name' field is set to 'OData'. Below this, the interface is split into two columns: 'CHANNEL DETAILS' and 'ADAPTER DETAILS'. In the 'CHANNEL DETAILS' column, 'Direction' is set to 'Receiver', 'System' is 'S4HC_OData', and 'Description' is empty. In the 'ADAPTER DETAILS' column, 'Adapter Type' is 'OData', 'Transport Protocol' is 'HTTP', and 'Message Protocol' is 'OData V2'.

Figure 3 – Receiver OData Adapter (GET Customer) – General/Channel Details.

The screenshot shows the 'OData' configuration window with the 'Connection' tab selected. The 'CONNECTION DETAILS' section contains the following fields: 'Address' is 'https://mysystemcode-api.s4hana.ondemand.com/sz'; 'Proxy Type' is set to 'Internet'; 'Authentication' is set to 'Basic'; 'Credential Name' is 'S4HC_API_USER'; and 'CSRF Protected' is checked.

Figure 4 - Receiver OData Adapter (GET Customer) – Connection/Connection Details.

Address	Enter the address of the OData service. <i>Note: In this case, it is used the API:</i> <i>https://mysystemcode-api.s4hana.ondemand.com/sap/opu/odata/SAP/API_BUSINESS_PARTNER</i>
Proxy Type	The type of proxy you want to use for establishing connection with OData Service. Currently, you can choose between Internet (default) and On-Premise. Define Internet for S/4HANA Cloud. For On-Premise systems it is required to define Location ID.
Location ID (Only Proxy Type as On-Premise)	Location ID that you've configured in the cloud connector installed on your system.
Authentication	Enter the authentication method for connecting to the OData service. E.g Basic, client certificate.
Credential Name	Credential name of the credentials that is deployed in Security Material section of  (Operations View)
Private Key Alias (Only for Client Certificate Authentication).	Enter the private key alias that enables the system to fetch the private key from keystore for authentication.
CSRF Protected	Check. By default, option.

3.3 Configure Receiver SOAP Adapter (CREATE Customer)

The receiver SOAP Adapter for Create Customer data is described below:

The screenshot shows the 'SOAP' configuration window with the 'General' tab selected. The 'Name' field is 'SOAP_RCV_S4HC_Create'. The 'CHANNEL DETAILS' section includes 'Direction' (Receiver), 'System' (S4HC_Create), and 'Description'. The 'ADAPTER DETAILS' section includes 'Adapter Type' (SOAP), 'Transport Protocol' (HTTP), and 'Message Protocol' (SAP RM).

Figure 6 – Receiver SOAP Adapter (Create Customer) – General/Channel Details.

The screenshot shows the 'SOAP' configuration window with the 'Connection' tab selected. The 'CONNECTION DETAILS' section includes 'Address' (https://mysystemcode-api.s4hana.ondemand.com/sz), 'URL to WSDL', 'Service', 'Endpoint', 'Operation Name', 'Proxy Type' (Internet), 'Authentication' (Basic), 'Credential Name' (S4HC_PROD_API_USER), 'Timeout (in ms)' (60000), 'Compress Message' (unchecked), 'Allow Chunking' (checked), 'Return HTTP Response Code as Header' (unchecked), and 'Clean-up Request Headers' (checked).

Figure 7 - Receiver SOAP Adapter (Create Customer) – Connection/Connection Details.

Address	Enter the address of the SOAP service. <i>Note: In this case, it is used the API: https://mysystemcode-api.s4hana.ondemand.com/sap/bc/srt/scs_ext/sap/businesspartnersuitebulkreplic</i>
Proxy Type	The type of proxy you want to use for establishing connection with SOAP Service. Currently, you can choose between Internet (default) and On-Premise. Define Internet for S/4HANA Cloud. For On-Premise systems it is required to define Location ID.
Location ID (Only Proxy Type as On-Premise)	Location ID that you've configured in the cloud connector installed on your system.
Authentication	Enter the authentication method for connecting to the OData service. E.g Basic, client certificate.

Credential Name	Credential name of the credentials that is deployed in Security Material section of  (Operations View)
Private Key Alias (Only for Client Certificate Authentication).	Enter the private key alias that enables the system to fetch the private key from keystore for authentication.

3.5 Configure Receiver system (SAP S/4HANA Cloud)

This section describes how to set up the communication scenario SAP_COM_0008 for Business Partner, Customer and Supplier Integration by using the Communication Arrangement tool.

3.5.1 Prerequisites

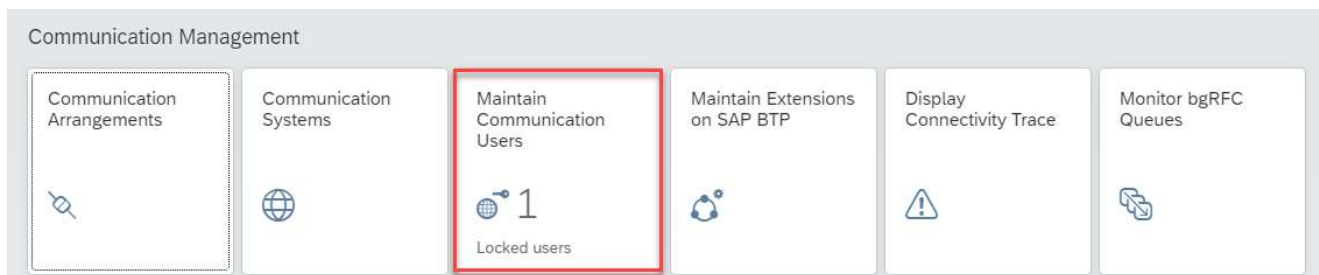

You must create a business role by using the template SAP_BR_ADMINISTRATOR and assign this to the administrator in the SAP S/4HANA Cloud system. For more information, refer to Maintain Business Roles. <https://uacp.hana.ondemand.com/http.svc/rc/PRODUCTION/1a93686c176845f0832a2a73221dd90b/1611%20500/en-US/frameset.htm?8980ad05330b4585ab96a8e09cef4688.html>

3.5.2 Communication User

The communication user defined in the SAP S/4HANA Cloud system is used for inbound communication and for processing messages in the system.

Procedure

1. Access the SAP S/4HANA Cloud system and log on as an Administrator.
2. Choose the Maintain Communication Users tile under Communication Management.

3. Choose New.

< **SAP** Create Communication User Q ? 31

General

User Data

User Name:* Description:*

Password

Password:

Certificate

[Upload](#)

Subject	Issuer
No data	

4. Enter the User Name and Description.
5. Enter a password. You can also upload an SSL client certificate.
6. Choose Create.

3.5.3 Communication System

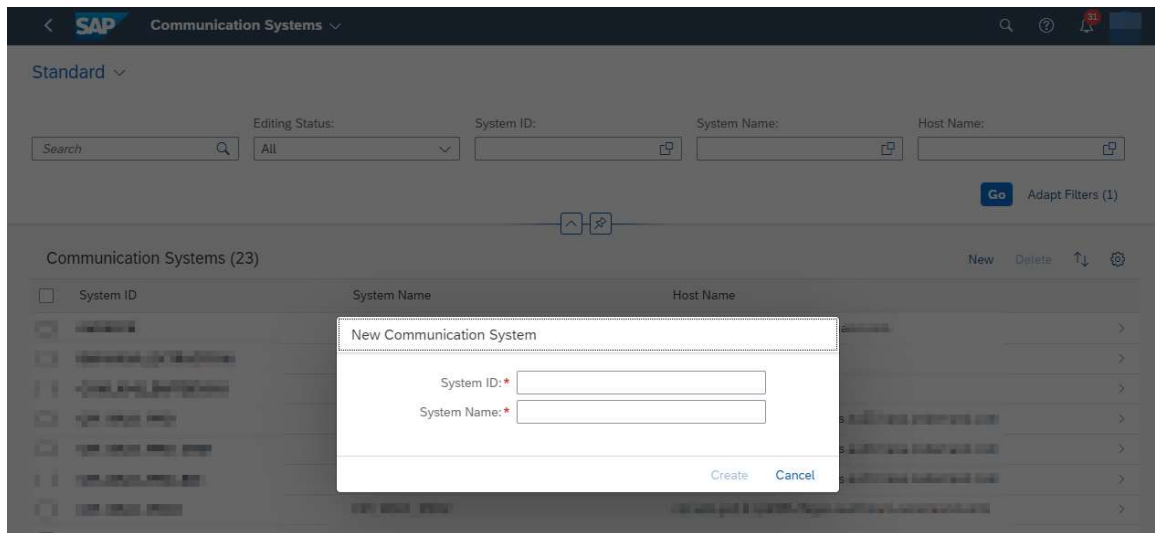

The communication system defined in the SAP S/4HANA Cloud system is used as the source or target system.

Procedure

1. Access the SAP S/4HANA Cloud system and log on as an Administrator.
2. Choose Communication Systems tile under Communication Management.

3. In the next window, choose New. The following screen appears.

4. Enter the System ID. Optionally, you can enter the ID to recognize the integration system, which relates to the SAP S/4HANA Cloud system.
5. Enter a descriptive name in the System Name field.
6. Choose Create.

The screenshot displays the configuration page for a communication system named "DEMO". The page is divided into several sections:

- General Data:** Includes fields for "System ID" (DEMO), "System Name" (DEMO), and "Notes".
- Technical Data - General:** Includes fields for "Host Name" (highlighted with a red border), "UI Host Name", "Logical System", "Business System", "Port" (443), "Is Hub System" (checkbox), and "Inbound Only" (checkbox).
- Cloud Connector:** A toggle switch set to "OFF".
- RFC Settings:** Includes a "Client" field.
- OAuth 2.0 Settings:** Includes fields for "Auth. Endpoint", "Token Endpoint", "Audience", and "mTLS Endpoint".
- Event Mesh:** A toggle switch set to "OFF".
- OAuth 2.0 Identity Provider:** A toggle switch set to "OFF".
- SAML Bearer Assertion Provider:** A toggle switch set to "OFF".
- OpenID Connect (OIDC) Provider:** A toggle switch set to "OFF".
- Contact Information:** Includes fields for "Contact Person Name", "E-Mail", and "Phone Number".

13. Choose Create.

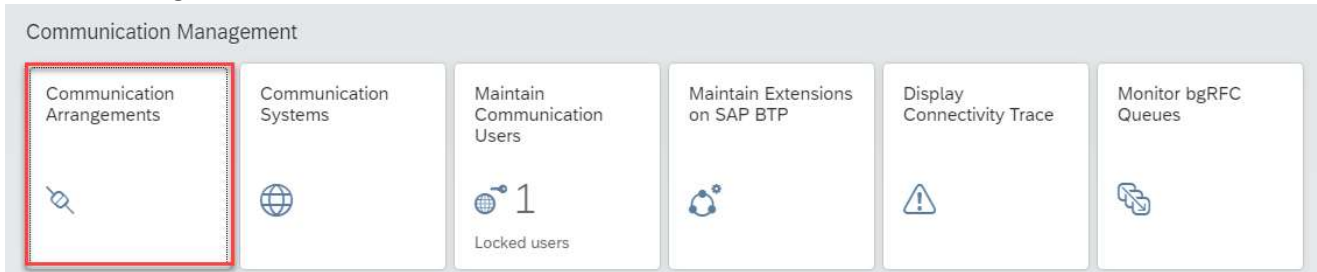

14. Choose Save.

3.5.4 Communication Arrangement

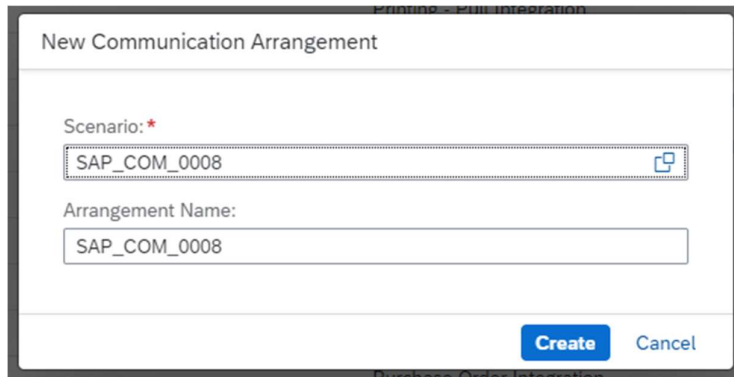

The Communication Arrangements defined in S/4HANA Cloud systems enables key users to create and edit communication arrangements that your company has set up with a communication partner.

Procedure

1. Access the SAP S/4HANA Cloud system and log on as an Administrator and open the app Communication Arrangements.

2. Choose New.

3. Choose the scenario SAP_COM_0008 from the value help
4. Enter an Arrangement Name.
5. Choose Create.
